Website Review & Suggested Improvements

After reviewing the website, we found a few areas that can be improved to enhance user experience and increase lead generation.

1. Homepage Banner
The current banner looks good, but it can be more focused on the treatment services being offered. Adding a stronger headline and a clear call-to-action can help visitors understand the service instantly.

2. Service-Specific Pages
For treatments like Piles, Fissure, and Fistula, dedicated pages would be beneficial. This will provide users with detailed information and also improve ad campaign performance.

3. WhatsApp Integration
Adding a floating WhatsApp button across the website can make it easier for visitors to connect instantly and inquire about treatments.

4. Patient Testimonials
Patient reviews are available, but showcasing more success stories and video testimonials can further build trust and credibility.

5. Doctor Information
Doctor profiles can be expanded with additional details such as qualifications, experience, areas of expertise, and professional photographs to strengthen patient confidence.

6. Inquiry Forms
The enquiry process can be made simpler by keeping forms short and easy to fill out. This may help improve the number of enquiries received through the website.

7. Blog & Educational Content
Regularly publishing informative articles related to treatments, symptoms, and patient concerns can help attract more organic traffic and educate visitors.

8. Mobile Experience
Most users visit healthcare websites through mobile devices. Further optimization of mobile usability and page speed can improve overall user experience.

9. Tracking & Performance Monitoring
Setting up proper conversion tracking will help measure enquiries, calls, and WhatsApp interactions more accurately and support future marketing efforts.

10. Contact Visibility
Important contact options such as phone number and WhatsApp should remain clearly visible throughout the website for easy access.

Overall, the website has a good foundation. With these improvements, it can provide a better user experience and generate more qualified enquiries.
